

Audio-Video Technical Planning.

Kilchenmann develops overall concepts for your media technology installations and plans the interconnection of your systems, thus ensuring the optimum integration of devices and technology.

We perform all planning work in accordance with SIA (Swiss Society of Engineers and Architects) guidelines,

Services:

- Consulting
- Concept and planning
- Tenders
- Technical construction management
- Client representation

from basic evaluation, draft and design planning to construction management and site monitoring.

Kilchenmann technical planners and consultants are skilled practitioners. During planning, we are application-orientated and efficient, with high levels of customer service. We find the right solution for your project.

Quality assurance thanks to
ISO certification

Your project in good hands.

Kilchenmann

Services

Consulting

You are a developer, electrical planning engineer or architect and are familiar with implementing a multimedia project? We can assist you as sub-planner or consultant. Use our expertise to extend your competences. We can advise and support you in all questions regarding multimedia technology.

Conceptual design and planning

Detailed requirements clarification is the foundation for optimum planning. Our planning experts use these to develop an AV plan that exactly matches your needs. Besides the conceptual plan, 2D/3D visualisations, pricing and acoustic calculations, it also contains clarification of special customised designs. Our long-standing experience in the field of industrial AV installations is your guarantee of practice-focused planning. A market-based estimate gives you security for your construction budget.

Tenders

We prepare technical tender documents for all types of procedures in public and private procurement. A detailed specifications document provides the basis for fair competition and transparent evaluation. A technically sound appraisal of bidders and submissions protects you from unexpected consequences.

Technical construction management

Kilchenmann assumes responsibility for coordinating deadlines, in addition to monitoring and controlling the progress of AV installation work, in order to ensure trouble-free implementation.

We perform factor tests, inspections and approvals and thereby guarantee that the quality requirements of the AV systems are met.

Client representation

We use our extensive knowledge of AV technology to strengthen your competence as a developer and thus ensure that the demands you place on AV technology are fully satisfied. As client representative, we will be by your side for the entire duration of planning and construction and our technical expertise ensures that your concerns are fully represented.

With its underlying green engineering philosophy, Kilchenmann supports the distribution and promotion of environmentally friendly technologies. This approach is taken into account during the entire system design and planning process and during component selection.
